

Abstract of the Disclosure

A disposable, tamper-resistant condiment shaker (10) containing a condiment (37) is supported within a cavity (24) of a decorative sleeve (20) to provide a more aesthetically pleasing condiment dispensing assembly (100). The sleeve (20) includes a securing member (29, 42, 44) to support the shaker (10) within the cavity (24). When the condiment supply within the shaker (10) has become depleted, the shaker (10) may be removed from the sleeve (20), discarded, and replaced with a new shaker (10). This cartridge type loading and refilling of the condiment (37) eliminates the need to pour condiment (37) into a dispenser.
